

Mooring Sheathed Cable Laying Grippers

Description

KLEY FRANCE manufactures grippers specially designed to hold sheathed wire rope up to 8" diameter.

Grippers are provided to pull or pay-out the sheathed cable under a maximum tension of 250 Tonnes.

The length and shape of the interchangeable inserts are calculated and designed to limit the radial pressure and to avoid any damage on the coating. These inserts have a smooth surface and large radius.

The cable can be removed by the top (opening gripper) with a minimum handling.

100 Tonnes Gripper
