Innovative Products & Solutions for use in some of the world's harshest environments

OceanTools OceanSENSE Cement Returns Detection System *Detecting tracer dye during well cementing operations*

The OceanTools OceanSENSE Cement Detection Systems are field proven on many offshore well cementing jobs with a very impressive 100% detection rate.

Dye may be added to either the packer or to the actual cement. As it flows out of the casing the OceanSENSE unit immediately detects it and announces the presence both visually and audibly.

The OceanSENSE unit is field-proven to work with a wide range of dyes including:

- OceanTools OceanDYE
- Rhodamines including RX9022 and B275
- Fluoresceins
- Pelagic 100 & 100 Pink
- Champion ClearDye

OceanSENSE can detect dyes other than the ones listed above. Please contact OceanTools for an up to date list of all detectable dyes.

KEY FEATURES

Potential to save many hours of rig time

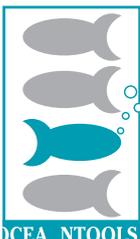

Impressive detection range up to 7m

Deployed via virtually any ROV

Audible notification of cement detected

Simple to operate system

Many times more powerful than pH meters
